

External validation: does our fuel vulnerability trend track JRF's cost-of-living-crisis account?
JRF p.19: relative poverty (AHC) was 'broadly flat' 2021/22->2022/23 -- a slow-moving annual measure by construction.
JRF pp.105-108: its faster cost-of-living tracker instead shows hardship peaking in Oct 2022 (75% of low-income households going without essentials) before easing slightly by Oct 2024 (69%) -- the sharp-spike-then-partial-easing shape this project's own wave-level rate reproduces below.
