

FES Scenarios × HighAEV — Scenario-Conditioned Interpretation (not a household-level prediction)

Scenario	Stress state	Dominant signal	HighAEV prev. (R1)	Interpretation	Policy implication
equal_core	low	gas	25.0%	Under this macro signal scenario (equal_core), the HighAEV group represents households with structurally high adaptive vulnerability observed under a low national...	Under low macro stress (equal_core), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high or low does...
equal_macro	moderate_neutral	gas	25.0%	Under this macro signal scenario (equal_macro), the HighAEV group represents households with structurally high adaptive vulnerability observed under a moderate_neutral...	Under moderate_neutral macro stress (equal_macro), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high...
vw_core	moderate_neutral	gas	25.0%	Under this macro signal scenario (vw_core), the HighAEV group represents households with structurally high adaptive vulnerability observed under a moderate_neutral...	Under moderate_neutral macro stress (vw_core), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high or...
vw_macro	moderate_neutral	gas	25.0%	Under this macro signal scenario (vw_macro), the HighAEV group represents households with structurally high adaptive vulnerability observed under a moderate_neutral...	Under moderate_neutral macro stress (vw_macro), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high or...
bayesian_core	moderate_neutral	gas	25.0%	Under this macro signal scenario (bayesian_core), the HighAEV group represents households with structurally high adaptive vulnerability observed under a...	Under moderate_neutral macro stress (bayesian_core), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself...
bayesian_macro	moderate_neutral	gas	25.0%	Under this macro signal scenario (bayesian_macro), the HighAEV group represents households with structurally high adaptive vulnerability observed under a...	Under moderate_neutral macro stress (bayesian_macro), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself...
actual_A	low	realised_volatility	25.0%	Under this macro signal scenario (actual_A), the HighAEV group represents households with structurally high adaptive vulnerability observed under a low national...	Under low macro stress (actual_A), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high or low does not...
actual_B	low	gas	25.0%	Under this macro signal scenario (actual_B), the HighAEV group represents households with structurally high adaptive vulnerability observed under a low national...	Under low macro stress (actual_B), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high or low does not...
actual_C	low	realised_volatility	25.0%	Under this macro signal scenario (actual_C), the HighAEV group represents households with structurally high adaptive vulnerability observed under a low national...	Under low macro stress (actual_C), the HighAEV group is the policy-relevant target for anticipatory support — whether that stress reading is itself high or low does not...
